

HARD SURFACE Wood-Cleaning

INTRODUCTION

Periodic cleaning of wood is as important as any other floor surface, and should be used as a maintenance plan between re-coatings. A thorough cleaning will also reveal the true condition of the finish and may be followed by the entire re-coating process.

PROCEDURE

- **STEP 1**
Determine if there is finish on the wood by placing drops of water in several places to see if it penetrates into the wood as evidenced by darkening. If there is no finish present, do not use this procedure.
- **STEP 2**
Vacuum with the **Backpack Vacuum** or other vacuum without beater bar.
- **STEP 3**
Mist **Bridgepoint Wood Cleaner** on floor and mop with **Terrycloth Towel** attached to **Bridgepoint Applicator**.
- **STEP 4**
Mist **Bridgepoint Wood Cleaner** on floor and on **Micro-fiber Bonnet**. Attach bonnet to **Rotary Machine** and clean entire floor area
- **STEP 5**
Let floor dry and use **White Polishing Pad** to buff floor with a **Rotary Machine** to bring back the shine of the finish.

Chemicals Needed

Bridgepoint Wood Cleaner
Type: *Hardwood Cleaner*
Highlights: *A one step cleaner that removes surface soil and embedded dirt.*

Accessories Needed

White Polishing Pad
Description: *Buffing pad*
Purpose: *To buff the polish back into freshly cleaned hardwood floors.*

Micro-Fiber Bonnet
Description: *Bonnet*
Purpose: *Great for use with the rotary machine to clean hardwood floors.*

2-qt Hand Sprayer
Description: *Pump Sprayer*
Purpose: *Great for use with the rotary machine to clean hardwood floors.*

Applicator w/ Terrycloth Cover
Description: *Chemical applicator*
Purpose: *To clean wood floors and apply finish.*

Equipment Needed

Backpack Vacuum
Description: *Vacuum*
Purpose: *Removes dry soil prior to cleaning.*
